

# 2BM Data Discovery Tool

## 2BM GDPR COMPLIANCE

### LOCATE ALL PERSONAL DATA IN YOUR SAP SYSTEM

Do you know exactly where all the personal data is in your SAP system? Not just some of them, but all of them? Personal data identification is an important element in meeting the GDPR requirements. And to handle personal data in accordance with GDPR, you must first know where they are.

The 2BM Data Discovery tool helps you build a deeper understanding of personal data in SAP. Extracting and analyzing data becomes easy and efficient. The tool provides an anonymized overview of data usage of (potentially) all tables in SAP, so you know where each piece of personal data is in your SAP system.

### KEY BENEFITS

Significantly reduces the time spent on table analysis to identify personal data, to hours instead of days

Quick and easy implementation - 1/2-1 day.

In-depth understanding of personal data in SAP.

## SYSTEMATIC APPROACH TO PERSONAL DATA IN SAP

Studies show that up to 30% of the tables that were initially identified as containing personal data can be excluded; the fields identified as personal data did not contain personal data at all.

With a systematic approach to personal data in SAP, you can reduce the manual workload for data extraction. 2BM's Data Discovery tool analyzes the size and content of tables and extracts all your data to determine which SAP tables contain personal or sensitive data.

Data can be downloaded at any time for historical comparison. Once you have control of your data and keep it up to date, you are really well on your way to living up to the GDPR requirements.

### KEY FEATURES

- Best practice to identification of personal data in SAP
- Extracts of large amounts of data run in the background without affecting the performance of your SAP system
- Support for all SAP ABAP systems, ECC, CRM, SRM, etc. • Output is presented online or in a file and consists of:
  - An overview with table names and usage information
  - A detailed list of used fields in each table
  - Information on available Information Lifecycle Management (ILM) and archive objects per table
  - Easy and simple to use for non-technical SAP users.
