2BM GDPR Suite

2BM GDPR COMPLIANCE

DO YOU LIVE UP TO THE GDPR REQUIREMENTS?

Many companies still have personal data in SAP that they cannot account for. Therefore, they have some tasks to take care of before they live up to the requirements of the GDPR - the new Personal Data Act. If you're one of them, 2BM's GDPR Suite for SAP can help you.

It starts with security and protection of personal data from unauthorized access. Then you can continue to locate data in the modules of the SAP system and extract reports to get an overview of all the personal data stored in your SAP system. These are the first steps towards living up to the requirements. The next step is to decide what to do with this data. Redundant and outdated data can be deleted, and here you can use the GDPR Suite's operational deletion tool.

The analytical and operational tools are easy to use and value for money: they are quick to implement, they reduce the risk of not living up to GDPR requirements considerably, and they help you document that you live up to the requirements.

KEY BENEFITS

Helps you identify potential improvement for personal data processing

Helps you meet the GDPR requirements

Low TCO and implementation costs

GDPR REQUIREMENTS AND SAP

The GDPR Suite for SAP consists of both analytical and operational tools. With 2BM Security Dashboard you get an overview of your security parameters in SAP. The suite's Data Discovery tool helps you identify employee data in every nook and cranny of SAP, and the Subject Access Report tool handles personal data queries by extracting data across the various SAP modules. Finally, the 2BM Employee Deletion tool helps you delete personal data. 2BM's GDPR Suite for SAP covers all aspects of GDPR and reduces the risk of not living up to the requirements considerably.

2BM's GDPR Suite is based on our own approach to best practice, and we continuously develop the tools so that we can support our customers in living up to the GDPR requirements.

KEY FEATURES

- Easy and fast setup
- Simple end-user functionality
- Easy reporting and extraction of personal and sensitive data in SAP
- Brings clarity about personal and sensitive data in SAP
- Ongoing development with input from the Danish Data Protection Agency and our customers.

2BM AS YOUR PARTNER

2BM GDPR Suite is a toolkit for SAP that reduces the implementation and operating costs of statutory personal data management. The analytical tools create an overview of personal data and identify where data is stored. The operational tools help you perform the tasks that have been identified in the analytical reports.

All the tools are quick and easy to implement, and they are continuously developed with the help of knowledge from both the Danish Data Protection Agency and our customers. Based on our extensive experience in developing IT tools, we have created a suite of tools that will help you quickly live up to the requirements of the GDPR.
